

supervisor_max_metered_licenses

Synopsis

`supervisor_max_metered_licenses = number`

This parameter allows the site-administrator to set the maximum number of metered licenses this supervisor may use at any given time.

This value works in concert with the "concurrent metered limit" as set in the "Billing Account" on the Metered Portal at <https://metered.pipelinefx.com>

The lesser of the two values (`supervisor_max_metered_licenses` and the "Concurrent Metered Limit" will be the applied limit.

Setting this to 0 effectively disables metered licensing, while setting it to -1 (default), allows usage up to the metered account's limit .

Example

`supervisor_max_metered_licenses = 200`

Defaults

-1
