

# License Usage Data Collection and Reporting Setup

Your supervisor's license usage must be tracked in order to utilize PipelineFX's Metered Licensing. In order for this to occur, a data collector must be installed and configured.

Which data collector is installed depends on your operating system and Qube version. The following table can be used to direct you to the appropriate documentation

Operating System	Qube Version	Data Collector Installation
Windows	up to 7.0	<a href="#">Metered License Agent</a>
OS X	up to 7.0	<a href="#">Metered License Agent</a>
Linux	6.9	<a href="#">Metered License Agent</a>
Linux	6.10 and later	<a href="#">Data Relay Agent</a>
