

# WranglerView 6.6-1 Release Notes

---

## 6.6-1a FEATURES AND FIXES

---

=====  
The 6.6-1a patch was only released on Windows to address an issue that prevented WranglerView from starting on Windows Server 2008, Windows Server 2012, and a few cases on Windows 7 Professional.

The issue was related to the building of the WranglerView executable for release and not code internal to WranglerView itself.

=====

=====  
New features

==== CL 12909 =====

@NEW: expose database\_\* parameters in configuration dialog

=====  
Fixes
