

worker_pidfile

Synopsis

`worker_pidfile = path`

Path is where the Worker writes down the process ID to the main controlling process.

Note for Qube Worker hosts

This is a Worker startup parameter. Since this parameter is involved in the initial startup of the worker and affects the behavior of the worker before it contacts the supervisor to request a "remote" configuration from the central worker configuration file (see [qbwrk.conf](#)), it's considered a *bootstrapping* parameter and *can only be specified in the worker's local qb.conf* configuration file. Any mention in the global qbwrk.conf file will be ignored.

This is a complete list of the Worker bootstrap parameters

- [qb_directory](#)
- [qb_domain](#)
- [qb_supervisor](#)
- [worker_address](#)
- [worker_boot_delay](#)
- [worker_journal_location](#)
- [worker_lookup](#)
- [worker_max_threads](#)
- [worker_pidfile](#)
- [worker_port](#)

Example

`worker_pidfile = /tmp/wrkpid`

Defaults

- Linux & OS X: `/var/run/worker.pid`
- Windows XP/2003: `C:\Program Files\pfx\qube\logs\workerpid`
- Windows Vista/2008/7: `C:\ProgramData\pfx\qube\logs\workerpid`
