

# QubeArtistView Guide

QubeArtistView is a light-weight interface with a dark color scheme that is intended for use by artists, rather than administrators or render wranglers. QubeArtistView is built on PyQt with a python plugin architecture that drives all context-menus and information tabs.

On the Mac and Windows desktops, it is a monochrome Qube! icon.

In Linux, it is launched by typing

```
$ qubeArtistView
```

at the prompt (without the \$ prompt, of course).

This guide contains the following sections:

- [Managing Jobs with QubeArtistView](#)
- [Adding Custom Plugins](#)

In addition, details of all the interface functions are contained in this section:
