

WranglerView Complete Release Notes

Upcoming END OF LIFE announcement for WranglerView

Beginning with the 6.8 release, WranglerView will be entering a "sunset" phase. It will continue to ship until Qube v7.0.

WranglerView will not have any major new features or functionality added to this or future versions, and any changes will be limited to bug fixes or minor feature additions necessary to facilitate customer needs until they can make the transition over to the new Qube UI.

From Qube 7.0 onwards, all major functionality encompassed in WranglerView is anticipated to have been ported over to the framework that the current ArtistView is built on. With some additional features added along the way, this will be known as the new Qube UI.

There may be new minor features added to the administration and wrangler-centric functionality of WranglerView as needed until such time as the new Qube UI achieves parity with current WranglerView functionality.

6.10-1 FEATURES AND FIXES

New features

@NEW add support for Maya 2018 release to WV batchRender UI
