

WV User Permissions

The Admin Layout allows Qube! Administrators to view and modify default user and user permissions for Qube! actions.

A colon delimits between the user and groups. A full list of permissions are provided under the Permissions column, where the permission "all" denotes all basic user permissions.

Icons are used to denote the following permissions:

- yellow icon: a user or group with full basic user access.
- red icon: a user or group with administrator access
- white icon: a user or group with partial user access
- grey/black icon: a user or group with no access

A Qube! user with local Administrator permissions can manage users and groups by selecting a user name and using the right-mouse menu.

Right-Click Menu Actions

- **Add User** – Add a new user
- **Add User Group** – Add a group under the specified user
- **Change Permissions** – Change the permissions of the selected user or group.
- **Remove User/Group** – Remove the selected user or group

These groups are not related to user groups the operating system may use - they are specific to Qube!
