

# proxy\_execution\_mode

## Synopsis

`proxy_execution_mode = mode`

*Mode* sets the execution mode for the proxy, either under the submitting user, or under a single "proxy" userid.

## Values

- **user**: Run jobs under the submitting user's userid. (Note: the submitting user's account must exist on all workers - typically via a central authentication system)
- **proxy**: Run jobs under `proxy_account` userid.

## Example

`proxy_execution_mode = user`

## Defaults

`proxy`
