

supervisor_max_worker_requeue

Synopsis

`supervisor_max_worker_requeue = retries`

Retries is the maximum number of attempts the Supervisor will make to assign a job to a Worker host that claims to have available CPUs. It will continue to make the attempts every 4 minutes until the *retries* attempts have been made and give up on that host until the next event, either a job submission or modification.

Example

`supervisor_max_worker_requeue = 12`

Defaults

8
