

# supervisor\_manifest\_flags

## Synopsis

`supervisor_manifest_flags = mask`

*Mask* specifies which events the administrator wants to track in the manifestlog. The field is described by a integer with the individual bits to signify which components to log. This log is located by default here:

- Linux & OS X: `/var/spool/qube/manifestlog`
- Windows XP/2003: `C:\Program Files\pfx\qube\logs\manifestlog`
- Windows Vista/2008/7: `C:\ProgramData\pfx\qube\logs\manifestlog`

## Values

- job = 1
- subjob = 2
- work = 4

## Examples

```
supervisor_manifest_flags = 3
supervisor_manifest_flags = "job,subjob"
```

## Defaults

```
supervisor_manifest_flags="job,subjob,work"
```
