

supervisor_max_worker_retry

Synopsis

```
supervisor_max_worker_retry = retries
```

Retries is the total number of attempts the Supervisor will make before giving up on a Worker host. When a host is marked as DOWN, the Supervisor will check the host on a periodic basis to insure that hosts which may have been temporarily lost (due to scenarios such as a dead network) the Supervisor will however stop trying to contact the host after it has tried to do so, and the max retry limit has been reached.

Example

```
supervisor_max_worker_retry = 128
```

Defaults

64
