

# qb\_directory

## Synopsis

`qb_directory = path`

*Path* is the path to the directory containing the Qube! distribution. Normally this distribution directory would be the one that contains the Supervisor daemon executable.

### Note for Qube Worker hosts

This is a Worker startup parameter. Since this parameter is involved in the initial startup of the worker and affects the behavior of the worker before it contacts the supervisor to request a "remote" configuration from the central worker configuration file (see [qbwrk.conf](#)), it's considered a *bootstrapping* parameter and *can only be specified in the worker's local qb.conf* configuration file. Any mention in the global qbwrk.conf file will be ignored.

This is a complete list of the Worker bootstrap parameters

- [qb\\_directory](#)
- [qb\\_domain](#)
- [qb\\_supervisor](#)
- [worker\\_address](#)
- [worker\\_boot\\_delay](#)
- [worker\\_journal\\_location](#)
- [worker\\_lookup](#)
- [worker\\_max\\_threads](#)
- [worker\\_pidfile](#)
- [worker\\_port](#)

## Example

`qb_directory =/apps/pfx/qube`

## Defaults

- Linux: `/usr/local/pfx/qube`
- OS X: `/Applications/pfx/qube`
- Windows: `C:\Program Files\pfx\qube`
