

Extra fields

The *extra* in the event specification refers to the type of event. Each type of event may require additional information.

In the case of the job, it requires nothing more. However in the case of the subjob it requires the subjob's ID number.

Example:

When the job's instance #5 is done, execute callback: done-subjob-self-5

Extra information required by each *type*:

job	None
subjob	<i>subjobid</i>
work	<i>workid/name</i>
host	<i>hostname</i>
time	<i>timeofday</i>
repeat	<i>timeofday-interval</i>
global	None
globaltime	<i>timeofday</i>
globalrepeat	<i>timeofday-interval</i>

The time of day is given in Qube time format. Intervals are in seconds.
