

worker_port

Synopsis

```
worker_port = port
```

Assigns the TCP/UDP network *port* number to the Worker daemon. This must be set on the Supervisor as well.

Note for Qube Worker hosts: this is a worker "bootstrapping" parameter

Since this parameter is involved in the initial startup of the worker and affects the behavior of the worker before it contacts the supervisor to request a "remote" configuration from the central worker configuration file (see [qbwrk.conf](#)), it's considered a *bootstrapping* parameter and **can only be specified in the worker's local qb.conf** configuration file.

- qb_directory
- qb_domain
- qb_supervisor
- worker_address
- worker_boot_delay
- worker_journal_location
- worker_lookup
- worker_pidfile
- worker_port

Example

```
worker_port = 5011
```

Defaults

```
50011
```
