Worker Logs

The Worker outputs log information to a file called workerlog. By default, the file is located in:

- Linux / OS X   `/var/log/workerlog`
- Windows Vista/2008/7   `C:\ProgramData\pfx\qube\logs\workerlog`
- Windows XP/2003   `C:\Program Files\pfx\qube\logs\workerlog`

> ⊘ **Linux Note**
> Under Linux, the logs are periodically rolled over by an installed crontab script.

Setting the location of the Worker log file

1. Modify the following setting in the Worker qb.conf or qbwrk.conf file on the Supervisor:
   `worker_logfile = `*`logfile`*
   where *logfile* is the path to the Supervisor log file.

2. If the Worker qb.conf was modified, restart the Worker to establish the changes to the settings

3. If the qbwrk.conf was modified, force a Worker reconfiguration:
   `% qbadmin worker --reconfigure`
