

# WranglerView 6.5 Release Notes

## Highlighted 6.5 Features and Changes

Added Autodesk 2014 support

Added Maxwell Cooperative Rendering and merging, including checkpointing ("resume render")

Added "submit job per render layer" for Maya renders

Added support for new "Job Tags" feature; show, shot, seq, client, dept, and custom[1-5]: columns in job list, searchable, and available in the Performance Charts view.

Added 3 new columns:

- "Slots Allocated ": expose how many slots a "1+" or "1-4" host.processors reservation is allocated at run-time, resets to 0 once instance starts running
- "CPU-Minutes": cumulative time - retrieved frames will accumulate this time, the run-time is multiplied by the number of allocated slots, so a job instance which is allocated 3 slots and runs for 60 seconds will show 180 cpu-minutes
- "images": display total images rendered and available to view in Output tab, total includes multiple layers per frame
